KYNO

Kyno Media Management & Archiware P5 Archive
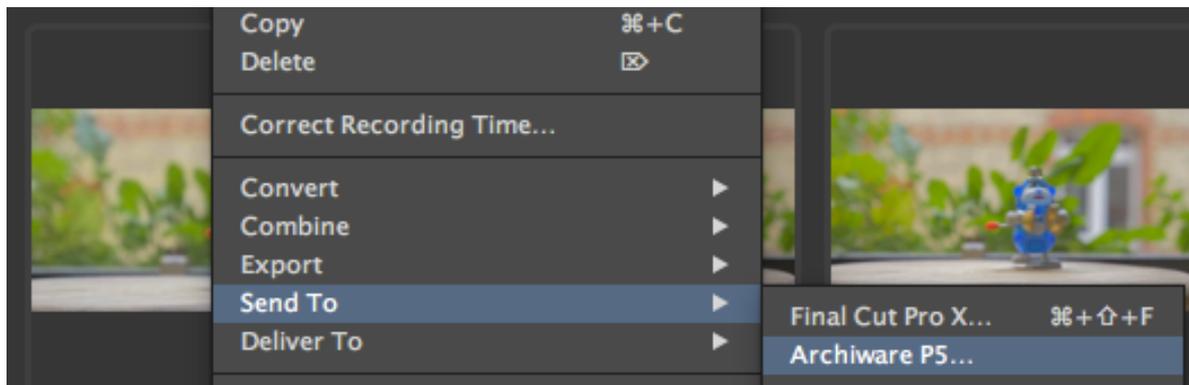

Powerful simplicity for online and offline media with KYNO's P5 integration

Dealing with hundreds or thousands of media files in production is a challenge. KYNO makes screening, logging, organization and transcoding of media fast and straight forward. Tight NLE integration and unbeatable ease of use increase productivity.

KYNO Workstation

KYNO by Lesspain Software is a Media Management App used by professionals in the media, entertainment & non-media industry as a media storage browser, player, logging and metadata tool, multi-purpose production assistant, file organiser and converter. Its easy to learn and simple to use interface works cross-platform on macOS & Windows and integrates with the tools you already use, like Final Cut Pro and Adobe Premiere Pro.

Archiware P5 Archive is a powerful archiving tool that migrates files off fast but costly online storage to the archive storage of choice, be it LTO tape, cloud or disk. Especially when combined with LTO tape, P5 Archive unleashes its full potential, offering features such as tape cloning to create a second copy for safe, offsite storage and that much-needed air gap, and drive parallelisation for even higher throughput.

KYNO´s integration with P5 Archive creates a solution with outstanding power and simplicity. Online and offline storage can now be used in production with similar ease of use. Finalised productions can migrate to the long-term archive from within the KYNO interface. Archive can be on either disk, tape or cloud storage. This makes LTO tape, the most economic storage for long-term archive, available from KYNO. All completed productions are kept safe and in reach for re-use, reference and monetisation of any kind. Customisable metadata fields and menus of P5 Archive can be used to build an individual metadata schema for specific searches. Thumbnails and proxy clips support visual browsing of all archived media.

Benefits of KYNO and P5 Archive integration

✓ Kyno and P5 install in minutes
✓ Powerful production support with online and offline files
✓ Move finalised production to long-term Archive
✓ Save high-performance online storage
✓ Archive to disk, tape or cloud storage
✓ P5 Archive supports LTO drives and libraries of all vendors
✓ Tape cloning for maximum security built-in
✓ Drive parallelization for maximum throughput built-in
